**GAMBARAN PENGETAHUAN APARAT DESA, PEMANFAATAN DANA DESA, DAN INOVASI KESEHATAN DALAM PENCEGAHAN DAN PENANGANAN *STUNTING* DI TINGKAT DESA KABUPATEN ROKAN HULU TAHUN 2018 (ANALISIS DATA SEKUNDER)**

xii + 116 halaman, 28 tabel, 2 gambar, 4 lampiran

**ABSTRAK**

**Tujuan Penelitian**

Untuk menangani masalah *stunting* diperlukan komitmen dari aparat desa. Peningkatan pengetahuan kesehatan merupakan salah satu kegiatan yang menjadi prioritas utama. Di samping itu pemanfaatan dana desa dan inovasi harus tetap dioptimalkan. Penelitian ini bertujuan untuk menganalisis gambaran pengetahuan aparat desa, pemanfaatan dana desa, dan inovasi kesehatan dalam program pencegahan dan penanganan *stunting* di tingkat desa Kabupaten Rokan Hulu 2018.

**Metode**

Metode penelitian ini adalah kualitatif dengan menggunakan data sekunder dari kuesioner hasil wawancara serta menggunakan analisis konten. Teknik pengumpulan data menggunakan triangulasi sumber. Variabel yang dianalisis adalah pengetahuan aparat, pemanfaatan dana desa, dan inovasi kesehatan dalam program pencegahan dan penanganan *stunting*.

**Hasil**

Hasil penelitian didapatkan bahwa sebagian besar aparat desa tidak mengetahui program tablet tambah darah untuk calon pengantin, tata laksana gizi buruk dan gizi kurang, air bersih, sanitasi, dan cuci tangan pakai sabun. Semua aparat desa tidak mengetahui program suplementasi taburia. Beberapa kegiatan yang berkaitan dengan pemanfaatan dana desa untuk masalah *stunting* telah dilaksanakan. Semua desa tidak mempunyai inovasi di bidang kesehatan maupun gizi.

**Kesimpulan**

Pelaksanaan program gizi terkait *stunting* masih belum terlaksana dengan baik. Diharapkan agar antar instansi baik di tingkat kabupaten, kecamatan, dan desa dapat berkolaborasi dan berintegrasi dalam pelaksanaan program pencegahan dan penanganan *stunting*.

**DESCRIPTION OF VILLAGE APPARATUS KNOWLEDGE, UTILIZATION OF VILLAGE FUNDS, AND HEALTH INNOVATION IN PREVENTION AND HANDLING PROGRAMS OF STUNTING IN VILLAGE LEVELS OF ROKAN HULU REGENCY 2018 (SECONDARY DATA ANALYSIS)**

xii + 116pages, 28 tables, 2 pictures, 4 appendices

**ABSTRACT**

**Objective**

To deal with the problem of stunting, it requires commitment from the village officials. Improving health knowledge is one of the activities that is a top priority. In addition, monitoring of village funds and innovation must continue to be optimized. This study aims to analyze the description of village officials knowledge, the utilization of village funds, and health innovations in the prevention and handling programs of stunting in the village level in Rokan Hulu Regency 2018.

**Method**

This research method was qualitative, used secondary data from questionnaires from interviews, and used content analysis. Data collection techniques used source triangulation. The variables analyzed were village apparatus knowledge, utilization of village funds, and health innovations in prevention and handling programs of stunting.

**Result**

The results showed that most village officials didn't know about programs of the blood-tablet supplement for future bride and groom, management of malnutrition, clean water, sanitation, and washing hands with soap. All village officials also didn't know about taburia supplementation program. Several activities related to the utilization of village funds for stunting problems had been carried out. All villages did not have innovations in the fields of health or nutrition.

**Conclusion**

The implementation of the nutrition program related to stunting is still not well implemented. It is expected that inter-instance at the district, sub-district and village levels can collaborate and integrate in the implementation of prevention and handling of stunting programs.
