ABSTRAK

Tujuan Penelitian

RSUD dr. Sadikin Kota Pariaman telah mengimplementasikan Rekam Medis Elektronik (RME), namun belum seluruh unit pelayanan menerapkan RME secara optimal dan dalam pelaksanaannya masih ditemukan berbagai kendala. Tujuan penelitian ini adalah untuk menganalisis implementasi Rekam Medis Elektronik (RME) di RSUD dr. Sadikin Kota Pariaman Tahun 2026.

Metode

Penelitian ini dilaksanakan di RSUD dr. Sadikin Kota Pariaman pada Desember 2025 - Juli 2026 menggunakan metode kualitatif dengan desain studi kasus yang melibatkan 8 orang informan dengan *purposive sampling*. Pengumpulan data melalui wawancara mendalam, observasi, dan telaah dokumen. Analisa data menggunakan *content analysis* dengan teori George C. Edward III dan triangulasi data.

Hasil

Aspek komunikasi, penyampaian informasi RME dilakukan melalui apel, rapat, dan sosialisasi. Pada aspek sumber daya, masih terdapat keterbatasan kemampuan SDM, jumlah perangkat komputer, scanner dan printer serta jaringan internet yang belum stabil. Aspek disposisi menunjukkan adanya komitmen pimpinan dan pengguna terhadap implementasi RME. Aspek struktur birokrasi, belum tersedianya SOP dan struktur tim RME.

Kesimpulan

Implementasi Rekam Medis Elektronik (RME) di RSUD dr. Sadikin Kota Pariaman belum sepenuhnya optimal. Perlu dilakukan penyusunan SOP terkait RME, pembentukan tim implementasi RME, peningkatan kapasitas sumber daya manusia, penguatan infrastruktur teknologi informasi, serta penyediaan anggaran khusus untuk mendukung implementasi RME yang berkelanjutan.

**ANALYSIS OF THE IMPLEMENTATION OF ELECTRONIC MEDICAL
RECORDS (EMR) AT dr. SADIKIN REGIONAL GENERAL HOSPITAL
PARIAMAN CITY IN 2026**

xv + 232 pages, 25 tables, 13 pictures, 13 appendices

ABSTRACT

Objective

dr. Sadikin Regional General Hospital (RSUD) in Pariaman City has implemented Electronic Medical Records (EMR); however, its implementation has not yet been optimized across all service units, and several challenges remain. This study aimed to analyze the implementation of the Electronic Medical Record (EMR) system at RSUD dr. Sadikin Kota Pariaman in 2026.

Method

This study was conducted at dr. Sadikin RSUD, Pariaman City, from December 2025 - July 2026 using a qualitative method with a case study approach. It involving 8 informants selected via purposive sampling. Data collection was carried out through in-depth interviews, observations, and document reviews. Data were analyzed using content analysis based on George C. Edward III theory, and data triangulation techniques.

Result

In the communication aspect, information on EMR implementation was delivered through morning assemblies, meetings, and socialization activities. In the resource aspect, there were still limitations in human resource capacity, the availability of computers, scanners, and printers, as well as unstable internet connectivity. The disposition aspect indicated the commitment of hospital management and users toward EMR implementation. In terms of the bureaucratic structure, Standard Operating Procedures (SOPs) and an EMR implementation team had not yet been established.

Conclusion

The implementation of the Electronic Medical Record (EMR) system at RSUD dr. Sadikin Kota Pariaman has not yet been fully optimal. It is necessary to develop EMR-related Standard Operating Procedures (SOPs), establish an EMR implementation team, improve human resource capacity, strengthen information technology infrastructure, and allocate a dedicated budget to support sustainable EMR implementation.
