Abstract

This study aims to see whether the different transfer patterns will have an impact on the level of welfare of the people in Koto mosque and Pongkai Istiqomah. The method used in this research is mixed method, which is qualitative and quantitative research. Qualitative research is carried out through in-depth interviews and quantitative research though using the structural equation modeling method using stata. The data used are primary data 2018. Based on the processed data, the data shows that the transfer pattern affects welfare positively but not significantly, then the data obtained from in-depth interviews explain several factors that cause the level of welfare in Koto Masjid and Pongkai Istiqomah.

Keywords: *Involuntary Resettlement, Welfare, Mixed Method, Structural Equation Modeling.*
