

## CHAPTER IV

### CONCLUSION AND SUGGESTION

This chapter consists of a brief conclusion and suggestion of this research.

#### 4.1. CONCLUSION

Based on the first research problem, the finding shows that Hillary Clinton uses 8 types of women's language features they are lexical hedges or fillers, tag questions, rising intonations, empty adjectives, intensifiers, hypercorrect grammar, superpolite forms, and emphatic stress. The most dominant feature that Hillary use is intensifier as much as 62 times. It happens because Hillary tends to emphasize her statement in order to strengthen her assertion and to express her strong feeling of something. The possibility of why an intensifier often occurs in Hillary's utterances is because this video is a presidential debate. It forced Hillary to convince the audience that she deserved to be elected as president. So, she strengthens her assertion to make it more convincing.

The second research problem is about the functions of women's language features used by Hillary. The two functions of women's linguistic features are also found in this analysis they are hedging devices and boosting devices. The most dominant function that Hillary uses is boosting devices as much as 107 times.

## 4.2 SUGGESTION

This study contributes to the improvement of understanding women's language features. This study still far from perfection. However, this research can be used as a reference for future sociolinguistic research. Then, it is hoped that this research can be a stepping stone for bigger research.

This study gives an example of women's language that is used by Hillary Clinton. Then, it is hoped the future researcher can put other influential women as an object since there are many influential women in nowadays society that is famous in social media. They are commonly labeled as an influencer. Thus, it will be more challenging since no research analyzes women's language used the concept of women in Millennial's perspective.
