ABSTRAK

Tujuan

Penyebab terbesar kematian ibu adalah pendarahan. Pendarahan pada saat persalinan dapat berujung kematian apabila pendarahan yang terjadi akut dan produksi serta persediaan darah yang tidak cukup pada masa kehamilan. Tujuan penelitian ini untuk melakukan analisis implementasi program pencegahan dan penanggulangan anemia pada ibu hamil di Kelurahan Koto Baru nan XX desa binaan FKM Unand Tahun 2019.

Metode

Penelitian ini menggunakan metode kualitatif dengan pendekatan sistem, informan penelitian berjumlah 11 orang, informan ditentukan dengan teknik *purposive sampling*. Metode pengumpulan data melalui wawancara mendalam, *Focus Group Discussion*, dan studi dokumentasi. Analisis data dengan cara triangulasi sumber dan triangulasi metode.

Hasil

Hasil penelitian didapatkan untuk komponen input: petugas kesehatan masih kurang dan belum mencapai seluruh target sasaran. Biaya sudah mencukupi, sarana dan prasarana program sudah memadai dan metode pelaksanaan sudah sesuai pedoman/SOP. Komponen proses: program pencegahan dan penanggulangan anemia ibu hamil belum terlaksana dengan baik. Output: pelaksanaan program kelas ibu hamil di Kelurahan Koto Baru Tahun 2019 sudah mencapai target, namun program kunjungan ibu hamil dan pemberian TTD ibu hamil di Kelurahan Koto Baru Tahun 2019 belum mencapai target.

Kesimpulan

Pelaksanaan program pencegahan dan penanggulangan anemia pada ibu hamil di Kelurahan Koto Baru Tahun 2019 belum berjalan dengan baik. Diharapkan Puskesmas Lubuk Begalung dan Puskesmas Pembantu Koto Baru untuk memaksimalkan pelaksanaan program tersebut, mencukupi kebutuhan tenaga, sarana prasarana serta memberikan pendidikan gizi bagi masyarakat agar pengetahuan masyarakat meningkat dan merubah perilaku masyarakat menjadi lebih baik.

ANALYSIS OF ANEMIA PREVENTION AND HANDLING PROGRAM IMPLEMENTATION ON PREGNANT WOMEN IN KOTO BARU NAN XX AS FOSTERED VILLAGE OF PUBLIC HEALTH FACULTY, ANDALAS UNIVERSITY IN PADANG 2019

v + 119 pages, 16 tables, 12 pictures, 16 appendices

ABSTRACT

Purposes

Bleeding was the biggest cause to mothers death. During childbirth process can be lethal if the bleeding was acute also insufficient blood supplies and production during pregnancy. The purpose of this study was to analysis of anemia prevention and handling program implementation on pregnant women in Koto Baru Nan XX as fostered village of Public Health Faculty, Andalas University in 2019.

Method

This study used a qualitative method with a systems approach, with 11 research informants, the informant is determined by purposive sampling technique. The method of collecting data through in-depth interviews, Focus Group Discussion and documentation study. Data analysis was performed by source and method triangulation.

Results

The results obtained for the input component: health workers are still lacking and have not reached all the targets. The cost is sufficient, the facilities and infrastructure of the program are adequate and the method of implementation is based on the guidelines/SOP. Process component: anemia prevention and handling program in pregnant women hasn't been implemented well. Output: the implementation of the pregnant women class program in Koto Baru in 2019 has reached the target, however the program of visiting pregnant women and providing *Fe tablet* to pregnant women in Koto Baru in 2019 has not yet reached the target.

Conclusion

Anemia prevention and handling program for pregnant women in Koto Baru Village in 2019 hasn't been going well. It's expected that Puskesmas Lubuk Begalung and Puskesmas Pembantu Koto Baru can maximize that programs implementation, meet the needs of personnel, infrastructure and provide nutrition education for the community so that community knowledge increases and change people's behavior for the better.
