CHAPTER IV

CONCLUSION LIMITATION AND SUGGESTION

4.1. Conclusion

This research discusses the analysis of the overlap in law court in Caught in Providence Season 1. This research takes the data from Caught in Providence Facebook. There is 20 episode between the judge and the student of the school, college, and university as the defendant. Most of the students produce overlap on the judge's utterance although not all of the types of overlap are being used by students to do the interruption on the Judge's utterance. The types of overlap used in the research are five overlap onset.

From the data analysis, there are five types of overlap used on Caught in Providence Show Season 1. The number of finding data on the research is about 95 overlap. The most used type of overlap in this research is latched onset. Most of the defendants show the quick response after the completion of the Judge's utterance occurred on the conversation. There is no pause after the completion of the curent speaker's utterance. Other components of conversation, such as as the adjacency pair, turn taking, TRP, and repair help this research to gain a better comprehension of the talk and do a better data analysis

4.2. Limitation and Suggestion

After analyzing the research, there are some weaknesses in this research. The process of giving symbols on the data is seriously needed. The processes of giving symbol on the transcription is not all entirely correct. The accuracy of the transcription data is required to make the transcription correctly by using the ELAN application. The enlargement knowledge about the overlap is required to do the research. There is only

one theory of overlap that proposed by Gail Jefferson. The next researchers could seek more about the overlap in natural conversation. The addition of the related studies is needed on this research. Since, the related studies about the overlapping talk is limited especially in CA, the struggling in searching is needed to be the reference of overlapping talk on the future. The next researcher must be come directly to discuss about the relevant theory used on the research in theoritical framework.

The overlapping talk is part of conversation analysis study. The object of CA study can be found on natural conversation because the natural conversation is the characteristic of CA. The next researcher could seek more natural conversation on the society. For example, the conversation of family dinner, discussion, meeting and so on. The insight of Conversation Analysis especially overlap is important to know by the learner. The addition of the Conversation Analysis class is suggested by the English Department so that the learner has the insight on the overlap to improve their ability in all aspects of the linguistics english language.
