**ABSTRAK**

**Tujuan penelitian**

Capaian pelayanan KB pasca persalinan di 14 puskesmas Kota Padang belum mencapai target 35%. Tujuan penelitian ini adalah mengevaluasi Ketercapaian Program Keluarga Berencana (KB) Pasca Persalinan di Puskesmas Lubuk Buaya Kota Padang Tahun 2020.

**Metode**

Jenis penelitian kualitatif dengan pendekatan sistem, informan penelitian ini sebanyak 14 orang, teknik penentuan informan dengan *purposive sampling*. Penelitian dilakukan pada bulan Januari-Maret 2020. Metode pengumpulan data dengan wawancara mendalam, *Foccus Group Discussion* (FGD), telaah dokumen dan observasi. Analisis data dilakukan dengan *content analysis*. Pengolahan data menggunakan triangulasi sumber dan metode.

**Hasil**

Berdasarkan hasil penelitian pelayanan KB pasca persalinan belum sesuai dari segi kebijakan dan pelatihan. Tenaga pelaksana KB tidak mengetahui tentang peraturan KB pasca persalinan. Pelatihan jarang dilakukan dan hanya diikuti satu orang masing-masing puskesmas.

**Kesimpulan**

Pelayanan KB pasca persalinan di Puskesmas Lubuk Buaya perlu diperbaiki terutama dari segi kebijakan dan pelatihan. Pihak DP3AP2KB diharapkan memberikan pelatihan secara rutin, dan mensosialisasikan kebijakan KB pasca persalinan kepada setiap puskesmas. Diharapkan kepada puskesmas dapat melakukan penyuluhan secara rutin dan meningkatkan kerjasama dengan DP3AP2KB.

**ABSTRACT**

**Objective**

The achievement of postpartum family planning services in 14 Padang city health centers still has not reached the 35% target. The purpose of the research is to evaluate the achievement of postpartum family planning program in Lubuk Buaya health center Padang city in 2020.

**Method**

This type of qualitative research with a system approach, informants for the study amounted to 14 people, the technique of determining informants were purposive sampling. The study was conducted in January-March 2020. Data accumulation methods were in-depth interviews, foccus group discussion (FGD), document review and observation. Data analysis was done by content analysis. Data processing uses triangulation of sources and methods.

**Result**

Based on the research result, postpartum family planning services not appropriated yet in terms of policy and training. Staff of family planning did not know the rules about postpartum family planning. The training was rarely done and only followed by one person each health center.

**Conclusion**

Postpartum family planning sevices at the Lubuk Buaya health center need to be improved, especially in terms of policy and training. The DP3AP2KB is expected to provide training and disseminate policies of postpartum family planning to health centers. It is suggested that health center conduct routine counseling and increase collaboration with DP3AP2KB.
