**Gambaran Karakteristik Bayi Suspek COVID-19 Yang Dirawat Di Ruang  
Isolasi Neonatologi RSUP Dr. M. Djamil Padang Tahun 2020**

**ABSTRAK**

COVID-19 sangat cepat menyebar, menyerang semua kelompok umur, termasuk neonatus. Neonatus memiliki risiko lebih tinggi mengalami gejala-gejala COVID-19. Penelitian ini bertujuan untuk mengetahui gambaran karakteristik bayi suspek COVID-19 yang dirawat di ruang isolasi neonatologi RSUP Dr. M. Djamil Padang dari bulan Maret 2020 sampai Januari 2021. Metode penelitian adalah kuantitatif dengan desain *Descriptive*. Data yang didapatkan merupakan data sekunder dari dokumen rekam medis sebanyak 114 responden dengan teknik *total sampling* dengan menggunakan lembar observasi. Hasil dari penelitian menunjukkan bahwa 54,4% responden berjenis kelamin laki-laki 43,0% memiliki berat badan lahir rendah, 36,0% lahir prematur, 7,9% lahir dari ibu terkonfirmasi, 41,2 % mengalami hipertermia, 52,6% menggunakan alat bantu napas, 71,9% memiliki tipe klinis pneumonia neonatal berat dan 97,4% memiliki hasil labor PCR negatif. Diharapkan pelayanan kesehatan dapat memprioritaskan pemeriksaan PCR kepada ibu hamil untuk penegakan diagnosis Covid-19 secara cepat sehingga perawatan terhadap bayi dapat dilakukan secara optimal dan pencegahan Covid-19 terhadap ibu dan bayi.

**Description of the Characteristics of COVID-19 Suspected Infants Treated in  
the Isolation Neonatology Room Dr. M. Djamil Padang Hospital in 2020**

**ABSTRACT**

COVID-19 is very fast spreading, affecting all age groups. Neonatus have a higher risk of developing COVID-19 symptoms. This study aims to describe the characteristics of infants with suspected COVID-19 who are treated in the neonatology isolation room of Dr. M. Djamil Padang from March 2020 - January 2021. This research method is quantitative with design descriptive. The data obtained is secondary data from medical record document as many as 114 respondents with total sampling technique. This study uses an observation sheet. The results of this study showed that 54.4% of respondents were male, 43.0% had low birth weight, 36.0% were born prematurely, 7.9% were born to confirmed mothers, 41.2% had hyperthermia, 52.6% used a breath aid, 71.9% had a clinical type of severe neonatal pneumonia and 97.4% had a negative laboratory PCR result. It is hoped that health services can pay more attention check PCR to Pragnant due to Covid-19 diagnosis as soon as possible for infant care more effective and preventive of covid 19 for mother and infant.
