SEKOLAH DASAR

**ABSTRAK**

Cuci tangan pakai sabun merupakan salah satu tindakan sanitasi dengan membersihkan tangan dan jari-jemari menggunakan air dan sabun untuk menjadi bersih serta dapat mencegah teradinya penyakit. Karena anak pada usia sekolah dasar sangat aktif dan rentan terhadap penyakit, maka dibutuhkan kesadaran dari mereka bahwa pentingnya perilaku sehat cuci tangan diterapkan dalam kehidupan sehari-hari. Perilaku seseorang dapat dipengaruhi oleh faktor-faktor seperti pengetahuan, sikap, dan tindakan. Penelitian ini bertujuan mengetahui peningkatan pengetahuan, sikap, tindakan cuci tangan siswa sekolah dasar setelah pemberian pendidikan kesehatan dengan menggunakan metode video melalui telaah jurnal. Metode penelitian berupa literature review dengan cara mencari artikel dari database : *PubMed*, *ScienceDirect*, dan *Google Scholar* dengan rentang tahun 2015-2020. Hasil penelitian didapatkan 10 artikel yang memenuhi persyaratan kriteria inklusi dan eklusi yang mencakup tentang pengetahuan, sikap, dan tindakan cuci tangan pada siswa sekolah dasar setelah pemberian video pembelajaran cuci tangan, yang mana terdapat peningkatan pengetahuan, sikap dan, tindakan siswa sekolah. Di sarankan untuk tim kesehatan baik itu puskesmas, atau pustu untuk sering - sering turun, mengecek dan memberikan edukasi agar kedepan nya siswa sekolah dasar benar - benar bisa memahami tentang cuci tangan, penting nya cuci tangan, dan cara melakukan cuci tangan yang baik dan benar.

Kata kunci : Cuci tangan, pendidikan, vidio, pengetahuan, sikap, anak , dan sekolah dasar.

EFFECTIVENESS OF USING HEALTH EDUCATION  
VIDEO LEARNING TO KNOWLEDGE,  
ATTITUDES AND HANDWASHING ACTIONS FOR STUDENTS  
PRIMARY SCHOOL

**ABSTRACT**

Washing hands with soap is one of the sanitary measures by cleaning hands and fingers using water and soap to make them clean and prevent disease. Because children at primary school age are very active and susceptible to disease, it requires awareness from them that the importance of healthy hand washing behavior is applied in daily life. A person's behavior can be influenced by factors such as knowledge, attitudes, and actions. This study aims to determine the increase in knowledge, attitudes, and the action of washing hands of elementary school students after providing health education using the video method through journal analysis. The research method is in the form of literature reviews by searching for articles from the database: PubMed, ScienceDirect, and Google Scholar with a range of 2015-2020. The results obtained 10 articles that meet the requirements of inclusion and exclusion criteria which include knowledge, attitudes, and actions of washing hands in elementary school students after giving handwashing learning videos, in which there is an increase in the knowledge, attitudes and actions of school students. It is recommended for the health team, be it the puskesmas, or pustu to come down frequently, check and provide education so that in the future primary school students can really understand about washing hands, the importance of washing hands, and how to wash hands properly and correctly. . where there is an increase in the knowledge, attitudes and actions of school students. It is recommended for the health team, be it the puskesmas, or pustu to come down frequently, check and provide education so that in the future primary school students can really understand about washing hands, the importance of washing hands, and how to wash hands properly and correctly. . where there is an increase in the knowledge, attitudes and actions of school students. It is recommended for the health team, be it the puskesmas, or pustu to come down frequently, check and provide education so that in the future primary school students can really understand about washing hands, the importance of washing hands, and how to wash hands properly and correctly. .

Keywords: washing hands, education, video, knowledge, attitudes, children, and elementary school.
