### **CHAPTER I**

#### INTRODUCTION

### 1.1 Background of the Problem

The era of globalization, technological innovation and increasingly fierce business, competition, forces, companies to change the strategies used in running their business. The growing business world makes business people realize that ownership of their resources is not only an ability that must be owned in competition, but the ability to innovate, information and knowledge of human resources is also an ability that company must have since the enactment of the ASEAN. Economic Community in 2015, which has the aim of improving the economy of each country with the concept of creating ASEAN as a single market and production business unit, where there is free flow of goods, services, production factors, investment and capital and the elimination of trade tariffs for trade among ASEAN countries, resulting in considerable pressure on the industry nationally, especially in the market domestic.

To maintain, the market, companies, must change their business; based on labor, into a business, based on knowledge with the main characteristics, of science (Kartikasari, & Hadiprajitno, 2014). With the existence of economic changes that are characterized by a knowledge based economy with knowledge management, the prosperity of a company tenends on a management, and capitalization creation from that knowledge Sawariuwone, 2003. The Macess of a company in facing a competition is very dependent on a knowledge management strategy rather than a strategy of allocating physical and financial assets (Bontis et al., 1999). This reality causes executives to pay more attention to the intangible assets owned by their companies.

Intangible, Asset, has, several, advantages, over, Tangible, Asset, one, of, which, is, that, intangible, assets, have, a, longer, and, renewable, economic, life, This, is, in, accordance, with, Barney, (1991), who, states, that, intangible, assets, can, be, treated, as, strategic, assets, that, can, provide, a, sustainable, competitive, advantage, for, the, company, because, of, their, valuable, difficult, to, imitate, rare, and, difficult, to,

substitute, for, other, things., An, example, of, the, many, intangible, assets, is, the, competence, of, people, or, employees, who, are, in, a, company., If, one, day, the, employee, dies,, the, company, can, recruit, new, people, with, similar, skills, and, knowledge, So, that, knowledge, can, be, said, to, be, an, essential, and, vital, component, of, business, and, a, more, sustainable, strategic, resource, to, gain, and, maintain, the, company's, own, competitive, advantage, One, of, the, approaches, used, in, the, assessment, and, measurement, of, knowledge, assets, is, Intellectual, Capital, (IC), which, has, become, the, focus, of, attention, in, various, fields, including, management, information, technology, sociology, and, accounting.

The company's awareness of the impartance of ICi isi thei foundationi fori ai companyi to be superior an dfithe company, itselfi willi provide, added, value, for, the company, (Solikhah, et, al., 2010). According, to, Mondal, and Gosh (2012), the definition of Intellectual Capital of IC differs from one researcher, to, another., There, is, no, mutual, agreement, regarding, the, definition, of, IC., Ini general, i ICi cani bei definedi as ani intangiblei asset, ori ani importanti intangiblei factor; of; a; company, that; has; a; significant; impact; on; the; overall; performance; and; success; of the company, even though IC, is not explicitly presented in the balance sheet: (Ghosh: &: Mondal,: 2009: 1 2013). IC is a combination of staff competency, internal structure and external structure (Chowdhury et al., 2018). Although there are various definitions of 1C, mainly due to the fact that there are two approaches namely knowledge based and economic a large number of scientists; and practices namely human capital, y three component structural, capital, and United mer wdhury<sub>i</sub> et<sub>i</sub> al.,<sub>i</sub> 2018;<sub>i</sub> capital Maditinosietial., 2011).

Human<sub>i</sub> capital<sub>i</sub> (HC)<sub>i</sub> is<sub>i</sub> a<sub>i</sub> core<sub>i</sub> component<sub>i</sub> of<sub>i</sub> IC<sub>i</sub> which<sub>i</sub> is<sub>i</sub> indicated<sub>i</sub> by<sub>i</sub> the<sub>i</sub> company's<sub>i</sub> wealth<sub>i</sub> as<sub>i</sub> seen<sub>i</sub> from<sub>i</sub> employee<sub>i</sub> competencies<sub>i</sub> consisting<sub>i</sub> of<sub>i</sub> knowledge,<sub>i</sub> skills,<sub>i</sub> education,<sub>i</sub> relationship<sub>i</sub> skills<sub>i</sub> and<sub>i</sub> values<sub>i</sub> (Chowdhury<sub>i</sub> et<sub>i</sub> al.,<sub>i</sub> 2018).<sub>i</sub> Bontis<sub>i</sub> et<sub>i</sub> al.,<sub>i</sub> (1999)<sub>i</sub> stated<sub>i</sub> that<sub>i</sub> HC<sub>i</sub> simply<sub>i</sub> represents<sub>i</sub> the<sub>i</sub> individual<sub>i</sub> knowledge<sub>i</sub> stock<sub>i</sub> of<sub>i</sub> an<sub>i</sub> organization<sub>i</sub> which<sub>i</sub> is<sub>i</sub> represented<sub>i</sub> by<sub>i</sub> its<sub>i</sub> employees.<sub>i</sub> If<sub>i</sub> the<sub>i</sub> human<sub>i</sub> resources<sub>i</sub> owned<sub>i</sub> by<sub>i</sub> the<sub>i</sub> company<sub>i</sub> are<sub>i</sub> good,<sub>i</sub> the<sub>i</sub> management<sub>i</sub> of<sub>i</sub> the<sub>i</sub> company's<sub>i</sub> assets<sub>i</sub> will<sub>i</sub> be<sub>i</sub> good,<sub>i</sub> with<sub>i</sub> good<sub>i</sub> asset<sub>i</sub> management,<sub>i</sub> the<sub>i</sub> company<sub>i</sub> will<sub>i</sub> gain<sub>i</sub> an<sub>i</sub> advantage<sub>i</sub> in<sub>i</sub> competing<sub>i</sub>

with other companies so that it can survive from everything that threatens the company's survival and will improve performance corporate finance.

Structural<sub>i</sub> capital<sub>i</sub> (SC)<sub>i</sub> is<sub>i</sub> also<sub>i</sub> very<sub>i</sub> important<sub>i</sub> for<sub>i</sub> an<sub>i</sub> organization<sub>i</sub> to<sub>i</sub> create<sub>i</sub> added<sub>i</sub> value<sub>i</sub> for<sub>i</sub> the<sub>i</sub> products<sub>i</sub> produced<sub>i</sub> and<sub>i</sub> to<sub>i</sub> gain<sub>i</sub> competitive<sub>i</sub> advantage<sub>i</sub> and<sub>i</sub> advantage<sub>i</sub> through<sub>i</sub> the<sub>i</sub> use<sub>i</sub> of<sub>i</sub> IC<sub>i</sub> in<sub>i</sub> creating<sub>i</sub> value<sub>i</sub> through<sub>i</sub> the<sub>i</sub> development<sub>i</sub> of<sub>i</sub> simultaneous<sub>i</sub> work<sub>i</sub> processes<sub>i</sub> (Collins<sub>i</sub> &<sub>i</sub> Smith<sub>i</sub> ,<sub>i</sub> 2006). SC<sub>i</sub> is<sub>i</sub> the<sub>i</sub> supporting<sub>i</sub> infrastructure<sub>i</sub> that<sub>i</sub> supports<sub>i</sub> the<sub>i</sub> functioning<sub>i</sub> of<sub>i</sub> HC. Bontis<sub>i</sub> et<sub>i</sub> al.,<sub>i</sub> (1999)<sub>i</sub> argue<sub>i</sub> that<sub>i</sub> if<sub>i</sub> an<sub>i</sub> organization<sub>i</sub> has<sub>i</sub> a<sub>i</sub> very<sub>i</sub> bad<sub>i</sub> SC,<sub>i</sub> it<sub>i</sub> will<sub>i</sub> be<sub>i</sub> very<sub>i</sub> difficult<sub>i</sub> to<sub>i</sub> achieve<sub>i</sub> the<sub>i</sub> full<sub>i</sub> benefits<sub>i</sub> of<sub>i</sub> IC<sub>i</sub> as<sub>i</sub> a<sub>i</sub> whole.

Customer; (relational) capital (RP) includes consumer; loyalty, i service; to; alliconsumers, i and good; relations; with suppliers; (Chewdhury et al., i 2018), i the important; concept, of RS; is knowledge; formed, in marketing; channels. Ai developing; organization; that has a good; RC can create; a good; dynamic; between suppliers; and customers. This is because; the supplier or customer; has high; loyalty, i this condition; can increase the profit; earned by the company. This is because; RC; is an IC; component that provides real; value; to the company.

Chen; et; al., 2005, suggested; an indirect; measurement of IC, namely; by; measuring; the efficiency of the added value generated by the company's; intellectual; ability; called the Value Added Intellectual. Coefficient; (VAIC).; The model; concept; used in VAIC; is the concept of tangible capital and financial; capital; and IC; (Bayraktarogluetal, 2019; Chowdhury et al., 2018); VAIC; is; a; method; for; measuring; the IC; refermance of accuracy; vinetis a value; added; coefficient; consisting; of Capital Efficiency (CEE). Pangan; Capital; Efficiency; (HCE); and Structural; Capital; Efficiency; (SCE).

This; approach; is; relatively; easy; and; possible; because; it; uses; existing; data; in; the; company's; financial; statements.; VAIC; describes; how; much; intellectual; capital; adds; value; to; a; company; from; the; use; of; these; assets.; Use; of; the; VAIC; measurement; method; provides; opportunities; for; companies; and; stakeholders; to; find; out; how; much; tangible; assets; and; intangible; assets; provide; value; and; how; efficient; they; are; in; providing; benefits; to; the; company; (Kujansivu; &; Lönnqvist,; 2007).

Resource, based, theory, is, used, as, the, basis, of, research, theory, According, to, Barney, (1991), this, theory, explains, the, resources, needed, for, the, company, and, whether, it, can, manage, or, use, it., Resource, based, theory, states, that, IC, is, a, company, resource, that, plays, an, important, role, as, well, as, physical, capital, and, financial, capital, (Solikhah, et, al.,, 2010)., Intellectual, capital, is, used, as, a, knowledge-based, company, asset, consisting, of, the, company's, experience, expertise, and, abilities., Intellectual, capital, is, usually, used, to, help, the, company's, business, continuity, in, order, to, achieve, long-term, competitiveness, (Pike, et, al.,, 2005)., Based, on, this, context, companies, need, to, develop, strategies, to, be, able, to, compete, in, the, market, In, principle, sustainability, and the gapabilities of a company, are, based, on, IC, so, that, all, available resources can create value added. Puntilo, 2009)., IC, as, an, organizational, capability, to, create, transfer, and, implement, knowledge.

The company's financial performance is a result that makes use of resources. Profiti isi ai parameteri in measuringi financial performance. Therefore, profiti isi needed, by, a, company, for the survival, of the company, Profits will be obtained if the company continues to carry out its operational activities. The company's operational, activities, will, be achieved if it, has, resources, who, are knowledgeable, and competent in their fields. Ill provide a positive signal for the company's, future prospects regarding the company's, financial, performance, so, that, with the increasing profit growth, it will provide a positive signal for the company's financial performance. Better profit growth will indicate that the company'si financial needs getting better or it is a measure of a company's performance a summary of the company's; financial; data; and; performance; results; for; one; year.; The; financial; statements; are; prepared; based; on; the; interests; of; company; management; and; other; parties; who; have; an; interest; in; the; company's; financial; data.; The; financial; report; produced, by, the, company, is, an, information, used, in, assessing, the, company's, financial, performance, Profit, is, an indicator, of the performance of, a company, because; the presentation of the information presented is an important focus of financial, performance. Investors, will, see, the company's performance from the annuali financiali reportsi issuedi byi thei companyi basedi oni thei company'si financiali performance and operational performance.

Measuring; the company's financial performance is a reference that can be profitable or not profitable for a business. Measurable company performance to find out all information is needed by stakeholders and other interested parties. Companies that have achieved their goals can be seen from the results of their work so that various efforts will be made to achieve good performance. One of the things done by the company in order to achieve good performance and be able to continue to innovate is that the company effectively develops quality human resources, reliable technology, and good relationships with customers where these are elements of IC.

With the management of the performance as an added value in the company, it can also be seen as an effect on performance. The measure of business performance in this study, is seen from the company's financial performance in terms of company profitability and company efficiency. Profitability is also related to efforts to maintain the survival of a company in the future. High profitability will reflect better financial performance. IC used by a company to maintain the life of a company, this can be seen how efficiently a company manages company assets so that it can be said that the efficiency of the company in managing assets is related to IC High efficiency will reflect better financial performance as seen from the management of company assets.

Currently, intellectual, capital is one of the important issues, that, is, very, interesting, to, study the property of the intellectual capital, the more efficient the use of capital, in the company. The results of research by Firer et al., (2003), found that intellectual capital has a positive effect on company performance. Likewise, research conducted by Cheniet al., (2005), Chui et al., (2011), proved that intellectual capital has a positive effect on firm performance and market value. Komnenic & Pokrajčić, (2012), who examined the performance of MNCs in Serbia found that there was a positive relationship between human capital and all financial performance indicators used but structural capital was only positively related to ROE, whereas based on (Chowdhury et al., 2018) it shows that IC affects The productivity outcome of a

company; and; IC; shows; little; influence; on; the; company's; financial; profitability; based; on; ROE; and; does; not; show; a; significant; effect; on; ROA.

Contrary<sub>i</sub> to<sub>i</sub> this<sub>i</sub> study,<sub>i</sub> the<sub>i</sub> research<sub>i</sub> of<sub>i</sub> Solikhah<sub>i</sub> et<sub>i</sub> al.<sub>i</sub> (2010)<sub>i</sub> failed<sub>i</sub> to<sub>i</sub> prove<sub>i</sub> that<sub>i</sub> IC<sub>i</sub> had<sub>i</sub> a<sub>i</sub> positive<sub>i</sub> effect<sub>i</sub> on<sub>i</sub> the<sub>i</sub> market<sub>i</sub> value<sub>i</sub> of<sub>i</sub> the<sub>i</sub> company.<sub>i</sub> In<sub>i</sub> the<sub>i</sub> research<sub>i</sub> of<sub>i</sub> Chu<sub>i</sub> et<sub>i</sub> al.,<sub>i</sub> (2011)<sub>i</sub> which<sub>i</sub> examined<sub>i</sub> the<sub>i</sub> effect<sub>i</sub> of<sub>i</sub> IC<sub>i</sub> on<sub>i</sub> MBTV,<sub>i</sub> ROA,<sub>i</sub> ROE,<sub>i</sub> and<sub>i</sub> ATO,<sub>i</sub> it<sub>i</sub> shows<sub>i</sub> that<sub>i</sub> there<sub>i</sub> is<sub>i</sub> a<sub>i</sub> negative<sub>i</sub> relationship<sub>i</sub> between<sub>i</sub> Human<sub>i</sub> Capital<sub>i</sub> indicators<sub>i</sub> and<sub>i</sub> all<sub>i</sub> financial<sub>i</sub> performance<sub>i</sub> indicators.<sub>i</sub> Research<sub>i</sub> conducted<sub>i</sub> by<sub>i</sub> Achmad<sub>i</sub> Solechan,<sub>i</sub> (2017)<sub>i</sub> on<sub>i</sub> the<sub>i</sub> financial<sub>i</sub> performance<sub>i</sub> of<sub>i</sub> companies<sub>i</sub> in<sub>i</sub> Indonesia<sub>i</sub> found<sub>i</sub> that<sub>i</sub> Human<sub>i</sub> Capital<sub>i</sub> has<sub>i</sub> no<sub>i</sub> effect<sub>i</sub> on<sub>i</sub> EPS<sub>i</sub> and<sub>i</sub> has<sub>i</sub> a<sub>i</sub> negative<sub>i</sub> effect<sub>i</sub> on<sub>i</sub> ROA,<sub>i</sub> and<sub>i</sub> Tobins'Q.

The inconsistent research results make the authors interested in examining IC1 matters and proving empirically whether IC2 has a significant effect on the financial performance of textile and garment industry companies listed on IDX1 in the 2016-2019 period. The reason the author chose the textile and garment industry is referring to previous research, namely research by Chowdhury et al., (2018) which examined textile companies in Bangladesh and in Indonesia the textile and garment industry is a national priority that is still prospective to be developed. The Textile and Garment Industry, itself is one of the contributors in the non-oil and gas processing industry to the contribution of Indonesia's Gross Domestic Product. Based on data obtained from the Central Statistics Agency, the development of the Textile and Garment industry has more ased from 2016 to 2019

Table 1.1

Development of Textile and Garment Industry to GDP (In %)

Type industry	of	2016	2017	2018	2019
Non-oil and g industry	as	4.43	4.85	4.77	4.34
Textile Garment Industry	&	-0.09	3.83	8.73	15.35

Source: secondary data, proprietas ANDALAS

In table 1.1 it can be seen the development of the textile industry and Garments from 2016-2019. With the appointment of the Textile and Garment industry as a pilot for industry 4.0 and since the establishment of the Free Flow agreement between ASEAN countries, which is a formidable challenge, it requires the textile and garment industry to improve human resource competence which is in line with IC so that the textile and garment industry can survive in the market. Because basically, IC affects the performance level of a company. According to intangible value should receive sufficient (Ulum et al., 2008) the attention because it has targe impact on the company's financial performance. If the company aims to increase profit revenue, then good service and relationships with customers are needed IC is a unique resource that makes IC as the key for companies to ereate Make-added companies and achieve the company's competitive advantage. Companies that have a competitive advantage can survive and compete with companies in a business environment. The indicator used in this assessment is the profitability of the company using the ratio of Return on Assets (ROA) and Return on Equity (ROE) and the efficiency of the company using the Asset Turnover (ATO) ratio in accordance with previous research conducted by Chowdhury et al., (2018).

## 1.2 Problem Formulation

Based on the background of the problems described above, the problem formulations to be examined does intellectual capital and its indicators affect the financial performance of textile and garment companies listed on the Indonesia Stock Exchange?

# 1.3 Research Objectives

The objectives of the research is to determine the effect of intellectual capital and its indicator on financial performance.

#### 1.4 Research Benefits

The results of this study are Stape Stanto Aprovide benefits to the author himself and various parties. First, the results of this study are expected to be material for consideration and input for textile and garment companies that are in an effort to improve financial performance and increase corporate value in the face of today's competitive era. With the research on the role of intellectual capital, it is hoped that companies in Indonesia will increasingly realize the importance of a good managerial role in managing every asset they have, including intangible assets. Second this research can be used as material for further research in order to increase insight and knowledge about the influence of intellectual capital on furancial performance and corporate market value.

# 1.5 Writing Systematics

This research consists of five chapters First, Chapter as Introduction that will describes by the chapter formulation research beginning and writing systematics. Second Chapter 2 Literature Reviews, this chapter contains the theory used to approach the problem to be studied. Then also completed with studies that have been done previously by other researchers. In addition, theoretical studies also contain theoretical frameworks and hypotheses formulated to conduct research.

Third, Chapter 3: Research Methodology, This section describes the methods used in research by providing an explanation of the variables in the study, population and sample, data collection sources and methods, and data analysis techniques. Fourth, Chapter 4: Research Results and Discussion This chapter will discuss the description of the research object, data analysis, interpretation of the results and arguments for the results obtained in accordance with the techniques used. And the last, Chapter 5: Closing that contains an explanation of the conclusions, limitations of the study, and suggestions from this study for interested parties.
