

## V. CONCLUSION

### 5.1 Conclusion

Based on this study, we can conclude that:

1. The recent study of a method to train pig-tailed macaque pick up coconut fruit represent that each region has own method for training macaque, mostly use Directional Instruction (reward or punishment), some of the region use trial-and-error method and Observation learning.
2. The trainer provides the best care for the macaques to stay fit and prosperous. This will have an impact on the economic value of the macaque itself.
3. The international media sentiments regarding the use of macaque labor as coconut pickers show disapproval, while the Indonesian media does not question the use of macaque labor as coconut pickers.

### 5.2 Suggestion

Further research and investigation about training pig-tailed macaque as coconut pickers. Training macaque use an appropriate training term of animal welfare.
