ANALISIS CAPAIAN INDIKATOR KAPITASI BERBASIS KINERJA DI PUSKESMAS IBUH KOTA PAYAKUMBUH TAHUN 2020

ABSTRAK

Tujuan Penelitian

Puskesmas Ibu merupakan puskesmas yang belum memenuhi dua indikator KBK hingga akhir tahun 2020 yaitu indikator angka kontak (0,4) dan indikator rasio peserta prolanis terkendali (0.1) Penelitian ini bertujuan untuk menganalisis capaian indikator Kapitasi Berbasis Kinerja di Puskesmas Ibu Kota Payakumbuh Tahun 2020.

Metode

Penelitian ini merupakan penelitian kualitatif yang dilakukan pada Bulan November -Juni 2021 di Puskesmas Ibu Kota Payakumbuh, dengan informan 11 orang yang ditentukan menggunakan teknik *purposive sampling*. Penelitian ini dilakukan menggunakan metode wawancara mendalam, observasi dan telaah dokumen.

Hasil

Tidak tercapainya indikator angka kontak disebabkan karena masyarakat takut berobat ke puskesmas dan tidak terlaksananya kegiatan kunjungan sehat pada masa pandemi COVID-19 sehingga kunjungan sakit dan kunjungan sehat menurun. Kegiatan prolanis tidak berjalan optimal seperti konsultasi medis, edukasi kelompok peserta prolanis dan pemantauan status kesehatan sedangkan home visit, *reminder SMS Gateway* dan aktivitas klub tidak terlaksana.

Kesimpulan

Kunjungan sakit dan kunjungan sehat menurun sehingga indikator angka kontak tidak memenuhi target. Pelaksanaan kegiatan prolanis yang masih kurang optimal dan kurangnya kesadaran peserta prolanis dalam meningkatkan status kesehatannya mengakibatkan indikator ratio peserta prolanis terkendali belum dapat mencapai target.

THE ACHIEVEMENT ANALYSIS OF PERFORMANCE - BASED CAPITATION INDICATORS AT THE PUSKESMAS IBUH OF PAYAKUMBUH CITY IN 2020

xii + 84 pages, 18 tables, 2 pictures, 14 attachments.

ABSTRACT

Objectives

Puskesmas Ibuh is a health center that has not met two of Performance-Based Capitation indicators until the end of 2020, namely the contact number indicator (0.4) and the controlled prolanis participant ratio indicator (0.1). This research aims to analyze the achievement of the Performance-Based Capitation indicator at the Puskesmas Ibuh of Payakumbuh City in 2020.

Methods

This research is a qualitative research conducted from November to June 2021 at Puskesmas Ibuh of Payakumbuh City, with 11 informants who were determined using purposive sampling technique. This research was conducted using in-depth interviews, observation and document review methods.

Results

The contact number indicator was not achieved because people were afraid to go to the public health center and the health visit were not carried out during the COVID-19 pandemic, so that sick visits and healthy visits decreased. Prolanis activities did not run optimally, such as medical consultations, education for groups of prolanis participants and monitoring of health status, while home visits, SMS Gateway reminders and club activities were not carried out.

Conclusions

Sick visits and healthy visits decreased so that the contact number indicator did not meet the target. The implementation of prolanis activities that are still less than optimal and the lack of awareness of prolanis participants in improving their health status has resulted in the controlled ratio of prolanis participants not being able to reach the target.
