Bachelor of Economics

Abstract

This study aims to determine the research literature that affects the influence of information and communication technology on economic growth in developing countries, especially Indonesia. This research is a literature study, which is carried out by collecting a number of previous research results from a number of leading journals. In accordance with the analytical research that has been carried out, it can be concluded that there is an effect of the use of information, communication and technology on economic growth in developing countries, especially Indonesia. Where the use of ICT is mostly done for the development of the economic sector, the most use of ICT is indicated by the increasing number of internet and mobile phone network usages via Android devices.

Keywords: Information, Communication, Technology & Developing Country

Thesis Advisor: Drs. Yusrizal Yulius, MA.
