

CHAPTER V SUMMARY

Summary is The closing chapter explains the essence or conclusions of the results of the literature analysis that has been carried out and is equipped with recommendations from researchers regarding the development of research with the same problem in the future.

5.1 Conclusion

In accordance with the state of the art analysis and the synthesis of the results of previous research, several important conclusions are proposed, namely:

1. Indonesia is one of the countries that is investing in ICT, this is indicated by the development of fiber optic infrastructure, software and satellites as part of investment in the ICT sector which is carried out for the long term.
2. Utilization of ICT in developing countries is not as good as people who use ICT in developed countries. Most people in developing countries in general, especially Indonesia, using ICT are considered less productive because it is more aimed at pleasure in the form of access to video (streaming), social media such as Facebook, Instantgram and others, while for productive things such as business development using ICT, it is not done a lot.
3. Utilization of ICT is able to make a positive contribution to economic growth in developing countries in general and Indonesia in particular. The existence of taxes required by the government on the use of state-owned

ICT facilities is the main factor that drives economic growth in developing countries.

4. The use of ICT throughout 2020 has greatly increased and has a fundamental role in people's lives in Indonesia and the world, this is due to the ongoing Covid 19 pandemic, which encourages people to implement a number of health protocols to reduce and break the chain of the spread of Covid 19. The existence of ICT, especially the internet and satellite-based technology devices, can create a productive society and contribute to national economic growth.

5.2 Recommendation

In accordance with the description of the conclusions of the analysis that has been carried out, several important recommendations are proposed for:

1. Future researchers are advised to develop a number of variables related to the use of ICT such as completeness of supporting facilities, user competence, ease of use and risk of utilization, besides that future researchers are expected to use factor analysis methods with confirmatory factor analysis approaches.
2. Future researchers are expected to try to build an analytical model with a quantitative approach by using a number of variables related to the use of ICT to encourage increased economic growth in a country, especially developing countries. These suggestions are important to improve the accuracy and accuracy of the research results obtained in the future.
