ABSTRAK

Tingkat kelulusan nasional uji kompetensi perawat masih perlu ditingkatkan, salah satunya mahasiswa Profesi Ners di Universitas Dehasen Bengkulu, materi soal yang paling banyak tidak terjawab adalah soal Anak dan Maternitas. Untuk itu perlu dilakukan inovasi dalam metode bimbingan, metode *One Minute Preceptor* (OMP) diduga mampu meningkatkan efektifitas bimbingan untuk meningkatkan kompetensi mahasiswa. Penelitian bertujuan untuk membandingkan efektifitas metode bimbingan *One Minute Preceptor* (OMP) terhadap kompetensi stase Keperawatan Anak dan Keperawatan Maternitas pada Mahasiswa Profesi Ners Universitas Dehasen Kota Bengkulu. Penelitian ini dibagi menjadi dua tahap, tahap I pelatihan metode OMP, peserta pelatihan terdiri dari 37 *Preceptor*. *Preceptor* Akademik 11 orang, *Preceptor* Klinik 26 orang (diantaranya terdapat 3 orang *Preceptor* stase Anak dan 3 orang *Preceptor* stase Maternitas) dan tahap II menilai rerata kompetensi mahasiswa sesudah intervensi OMP. Jenis penelitian adalah kuantitatif dengan desain *quasi experimen post test only design*. Sampel dalam penelitian ini mahasiswa berjumlah 30 responden. Pengambilan sampel dengan *total sampling*. Hasil penelitian didapatkan ada perbedaan pencapaian kompetensi mahasiswa ners (komunikasi, keterampilan dan perilaku profesional) antara stase keperawatan anak dengan keperawatan maternitas sesudah intervensi OMP. Diharapkan *preceptor* dapat menerapkan metode metode bimbingan *One Minute Preceptor* (OMP) pada stase maternitas.

ABSTRACT

The national graduation rate for the nurse competency test still needs to be improved, one of which is the Nursing Profession student at the University of Dehasen Bengkulu, the most unanswered question material is about Children and Maternity. For this reason, it is necessary to innovate in the guidance method, the One Minute Preceptor (OMP) method is thought to be able to increase the effectiveness of guidance to improve student competence. The aim of this study was to compare the effectiveness of the One Minute Preceptor (OMP) guidance method on the competence of Child Nursing and Maternity Nursing in Nursing Profession Students, Dehasen University, Bengkulu City. This research was divided into two stages, the first stage was the OMP method training, the training participants consisted of 37 Preceptors. There are 11 Academic Preceptors, 26 Clinical Preceptors (of which 3 are Child Preceptors and 3 are Maternity Preceptors). And phase II assesses the average competence of students before OMP intervention. This type of research is quantitative with a quasi-experimental post-test only design. The sample in this study consisted of 30 students. Sampling with total sampling. Research results obtained there are differences in the achievement of nursing student competencies (communication, skills and professional behavior) between pediatric nursing and maternity nursing after OMP intervention. It is hoped that the preceptor can apply the One Minute Preceptor (OMP) guidance method at the maternity stage.
