STUDI KASUS: GAMBARAN PERILAKU PENCEGAHAN COVID-19
DENGAN TEORI *HEALTH BELIEF MODEL* PADA REMAJA DI RW 008,
KELURAHAN PASIE NAN TIGO TAHUN 2021

ABSTRAK

Keputusan presiden Republik Indonesia Nomor 12 tahun 2020 menetapkan *coronavirus disease* (COVID-19) termasuk bencana non alam dan *World Health Organization* (WHO) menyatakan COVID-19 sebagai pandemi global pada 11 Maret 2020. Kasus positif Covid-19 di Indonesia pada kelompok usia anak dan remaja kian menanjak dan merupakan kasus yang tertinggi di dunia. Banyak anak muda umur 15-25 tahun terpapar Covid-19 karena kebiasaan berkumpul di kafe, warung kopi atau angkringan dengan tidak menjaga jarak dan melepas masker. Kelompok usia remaja bisa berpotensi mengalami infeksi dengan gejala yang sangat minimal dan tanpa gejala yang membuat remaja menjadi sumber penularan COVID-19 tanpa mereka mengetahuinya. Sehingga diperlukannya perilaku pencegahan COVID-19 pada remaja untuk mengurangi kasus COVID-19 dan memutus rantai penyebaran COVID-19. *Tujuan dari karya ilmiah ini adalah untuk mengetahui gambaran perilaku pencegahan Covid-19 pada remaja di RW 008, Kelurahan Pasie Nan Tigo.* Metode karya ilmiah berupa deskriptif kuantitatif dengan jumlah sampel 57 remaja. Hasil dari penelitian ini didapatkan bahwa *perceived susceptibility, perceived severity, perceived barriers, self efficacy, perceived benefits, fatalistic belief* serta *cues to action* pada remaja di RW 008 Kel. Pasie Nan Tigo tahun 2021 berada pada kategori sedang, pengetahuan remaja di RW 008 Kel. Pasie Nan Tigo mengenai gejala klinis Covid-19 adalah kategori kurang serta perilaku pencegahan COVID-19 pada remaja di RW 008 Kel. Pasie Nan Tigo adalah kategori sedang. Saran untuk pihak terkait perlunya peningkatan motivasi serta persepsi *Health Belief Model* (HBM) untuk dapat meningkatkan kepeduliannya terhadap perilaku pencegahan COVID-19

**CASE STUDY: DESCRIPTION OF COVID-19 PREVENTION BEHAVIOR
USING THE HEALTH BELIEF THEORY OF ADOLESCENTS IN RW 008,
PASIE NAN TIGO VILLAGE, 2021**

ABSTRACT

Presidential Decree of the Republic of Indonesia Number 12 of 2020 stipulates that coronavirus disease (COVID-19) is a non-natural disaster and the World Health Organization (WHO) declared COVID-19 a global pandemic on March 11, 2020. Positive cases of Covid-19 in Indonesia in the child age group and adolescents is increasing and is the highest case in the world. Many young people aged 15-25 years are exposed to Covid-19 because of the habit of gathering in cafes, coffee shops or ankringan by not keeping their distance and removing masks. Teenagers can experience infections with very minimal and asymptomatic symptoms that make teenagers the source of COVID-19 transmission without them knowing it. So it is necessary to prevent COVID-19 in adolescents to reduce cases of COVID-19 and break the chain of spread of COVID-19. The purpose of this scientific work is to describe the behavior of preventing Covid-19 in adolescents in RW 008, Pasie Nan Tigo Village. The method of scientific work is quantitative descriptive with a sample of 57 teenagers. The results of this study found that perceived vulnerability, perceived severity, perceived barriers, self-efficacy, perceived benefits, fatalistic beliefs and cues to act on adolescents in RW 008, Pasie Nan Tigo village in 2021 is in the medium category, the knowledge of teenagers in RW 008, Pasie Nan Tigo village in the category regarding symptoms of Covid-19 clinical behavior is lacking and prevention of COVID-19 in adolescents in RW 008, Pasie Nan Tigo village is a medium category. Suggestions for parties related to the need to increase motivation and perceptions of the Health Belief Model (HBM) to be able to increase their awareness of COVID-19 prevention behavior
